

THE END GAME

The universe needs icons. Those extraordinary few that stand clear of the rest. For these individuals who inspire greatness, only the purest formulation of Empire Ears will do. An icon like no other. A IEM that stands alone - so superlative as to be named after the god of wisdom, poetry, death, divination and magic. Odin has arrived. Its beauty leaves no room for doubt. Its power cannot be reasoned with.

Unquestionably, Odin sits at the pinnacle of the Empire Ears bloodline as our most legendary flagship in-ear monitor ever.

PURSUING EXTRAORDINARY

“ODIN is designed to make the most of every moment each listener spends in its company, promising instants of sheer listening euphoria. While conventional IEMs focus on simply reproducing sound, ODIN authoritatively delivers the exacting emotion of every nuance recorded through its extraordinary 5Hz-100kHz frequency response range. These inspirational, dreamlike moments are made possible by the utilization of the three best IEM driver technologies currently available, the most advanced crossover system in the industry, the most potent components we could possibly get our hands on and the masterful tuning by our founder, my father and CTO, Dean Vang.

ODIN is the personification of Empire’s DNA at its most extreme – in design, performance and breadth of capabilities. ODIN rediscovers the true meaning of engagement between listener and IEM.”

Jack Vang

VP of Empire Ears

A TRINITY IN UNITY

ODIN is the most powerful and exclusive IEM in Empire's history. Boasting three of the industry's most advanced driver technologies, ODIN is truly a standout tribrid flagship IEM with an uncompromising performance ethos focused on delivering the purest connection between listener and IEM.

Dual W9+ Subwoofers – Sub Bass, Bass

Our signature W9+ dynamic driver brought serious performance to the IEM world by combining the breakthrough of an enclosed woofer in a tuned bass-reflex system. Elevating the W9 design formula to its highest level, the W9+ boasts a larger internal coil diameter, more linear excursion envelope along with a more capable suspension to handle peak-to-peak excursion while mitigating distortion. W9+ extinguishes any limits the previous design had and delivers unparalleled bass on all fronts.

Five Precision Balanced Armature Drivers – Low Mid, Low Mid, Mid, Mid, Mid High

ODIN comes equipped with 5 proprietary balanced armature drivers to deliver the signature midrange that the world has come to know and love from Empire Ears.

Four Electrostatic Drivers – High, High, Ultra High, Ultra High

ODIN masterfully manipulates quadruple electrostatic drivers in unison with our proprietary EIVEC technology to effortlessly reproduce a remarkable 5Hz-100kHz frequency range. The ultralight moving membrane within Odin's electrostatic drivers give the most accurate transient response, resulting in unparalleled clarity, separation and detail.

synX: Legendary Crossover Network

Genetically dissimilar from the rest of the IEM world, our synX crossover network truly stands out with countless bespoke methods and technologies protecting it as a unique masterpiece. A marriage of 3 different driver technologies become symphonized by a unique, proprietary 7-way synX crossover network designed to maximize performance from each and every driver.

EIVEC: Mastering the Electrostatics

The lightning-quick electrostatic drivers accommodates ODIN's wide frequency range while remaining balanced and compact. A single bespoke transformer unites the quadruple electrostats via our proprietary EIVEC technology to all of the other components while eliminating any signs of phase incoherence and distortion.

ARC: Resonance Mitigation Technology

ARC (Anti-Resonance Compound) is a proprietary conformal coating that virtually eliminates unwanted vibrations and resonance from within IEMs. ARC effectively increases the mass of the components it's applied to: every driver, crossover, and sound tube. This gives the internals more solidity while serving as a dampener to absorb the unwanted resonance instead of reflecting them out of phase. With A.R.C. clarity is increased substantially, bass is deeper, and the IEM becomes more efficient.

STORMBREAKER

At Empire Ears we believe that an extraordinary IEM requires an extraordinary cable. For the first time ever we've collaborated with bespoke cable manufacturer PWAudio and PENTACONN of Japan to forge a cable worthy of Odin. Introducing Stormbreaker, an ultra premium handcrafted cable comprised of a proprietary USA-sourced OCC Copper Litz configured in a quad conductor, dual gauge design wrapped in an elegant black carbon jacket.

Stormbreaker is standard equipped with a CNC silver Valknut y-split featuring a .78 2-pin connector with a 2.5mm balanced termination. 2.5 to 3.5mm & 4.4mm Empire adapters are available.

BIFROST – A Visual Masterpiece

The Bifröst is an ultra-exclusive, one-of-a-kind faceplate designed to optically simulate the mythological rainbow bridge between Midgard and Asgard, the realm of the gods. The Bifröst features nine individual polymer layers in three proprietary lamination steps and each lamination is unique in its ability to filter and reflect specific wavelengths of light. This results in a faceplate that will produce breathtaking color transitions as the viewing angle changes -- literally shifting before your very eye.

The Bifröst is masterfully handcrafted in the USA by an award winning chemist that currently holds two patents in polymer science for high solids coating chemistry.
